

CRUD PROJECT

- **python -m django startproject crud**
- **cd crud**
- **python manage.py startapp database**
- **install in setting.py**
- **create templates**
database>templates>base.html, addshow.html, updatestudent.html
base.html

```
<html>
  <head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width,initial-scale=1.0">
    <title> crud - VISHAL</title>

  </head>
  <body>
    <div>
      <h1 style="text-align:center">Function based View Model Form Crud Project_VHA</h1>
      {% block content %}

      {% endblock content %}
    </div>
  </body>
</html>
```

Addshow.html

```
{% extends 'database/base.html' %}
{% block content %}
  <h4>add NEW STUDENT</h4>
{% endblock content %}
```

Updatestudent.html

```
{% extends 'database/base.html' %}
{% block content %}
  <h4>update NEW STUDENT</h4>
{% endblock content %}
```

- **For template render write views.py(database)**

```
from django.shortcuts import render
# Create your views here.
def add_show(request):
    return render(request, 'database/addshow.html')
```

➤ For server write in urls.py (crud)

```
from django.contrib import admin
from django.urls import path
from database import views

urlpatterns = [
    path('admin/', admin.site.urls),
    path('', views.add_show, name="addandshow")
]
```

➤ python manage.py runserver

Function based View Model Form Crud Project_VHA

add NEW STUDENT

➤ For making a table in admin make a class in models.py(database)

```
from django.db import models

# Create your models here.
class User(models.Model):
    roll=models.IntegerField()
    name=models.CharField(max_length=70)
    division=models.CharField(max_length=70)
```

➤ For Register your models in admin.py (database)

```
from django.contrib import admin
from .models import User
# Register your models here.
@admin.register(User)
class UserAdmin(admin.ModelAdmin):
    list_display = ('id', 'roll', 'name', 'division')
```

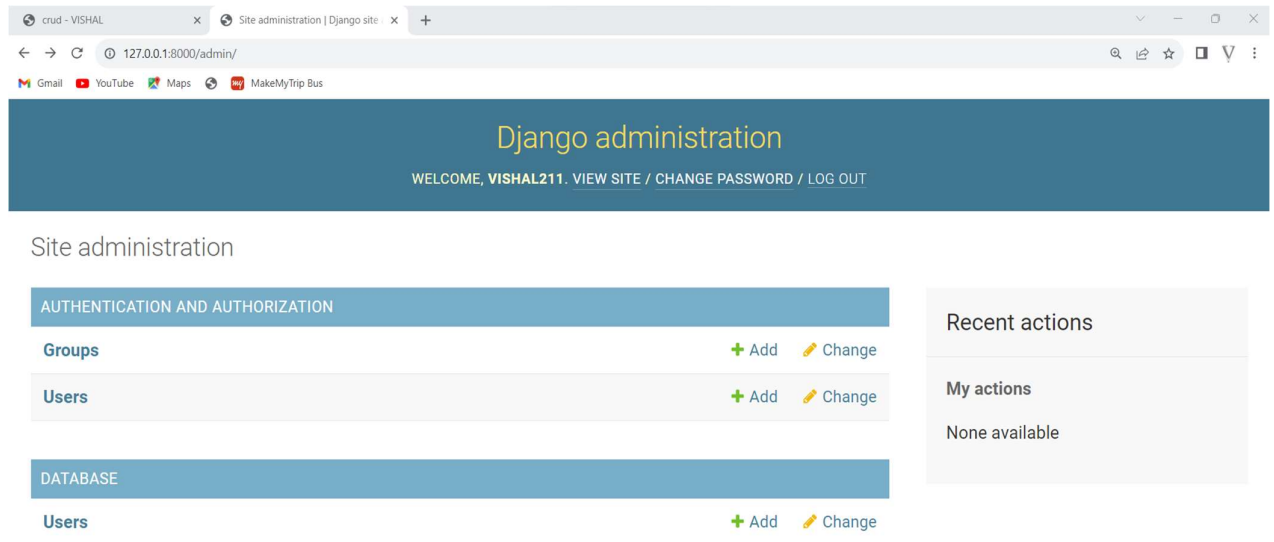

➤ For query generate
python manage.py makemigrations

➤ For query execute (making table)
Python manage.py migrate

➤ For admin login createsuperuser
Python manage.py createsuperuser

```
(env) D:\project\CRUD\crud>python manage.py createsuperuser
Username (leave blank to use 'vishal'): vishal211
Email address: v@gmail.com
Password:
Password (again):
The password is too similar to the username.
Bypass password validation and create user anyway? [y/N]: y
Superuser created successfully.
```

➤ python manage.py runserver

➤ for data entry make a form in forms.py

```
from django.core import validators
from django import forms
from .models import User

class StudentRegistration(forms.ModelForm):
    class Meta:
        model = User
        fields = ['roll', 'name', 'division']
```

➤ For User model and StudentRegistration connectivity in views.py

```
from django.shortcuts import render, HttpResponseRedirect
from .forms import StudentRegistration
from .models import User
# Create your views here.
def add_show(request):
    if request.method == 'POST':
        fm = StudentRegistration(request.POST)
        if fm.is_valid():
            r = fm.cleaned_data['roll']
            n = fm.cleaned_data['name']
            d = fm.cleaned_data['division']
```

```

    reg = User(roll=r, name=n, division=d)
    reg.save()
    fm = StudentRegistration()
else:
    fm = StudentRegistration()
stud = User.objects.all()
return render(request, 'database/addshow.html', {'form':fm, 'stu':stud})

```

➤ Output

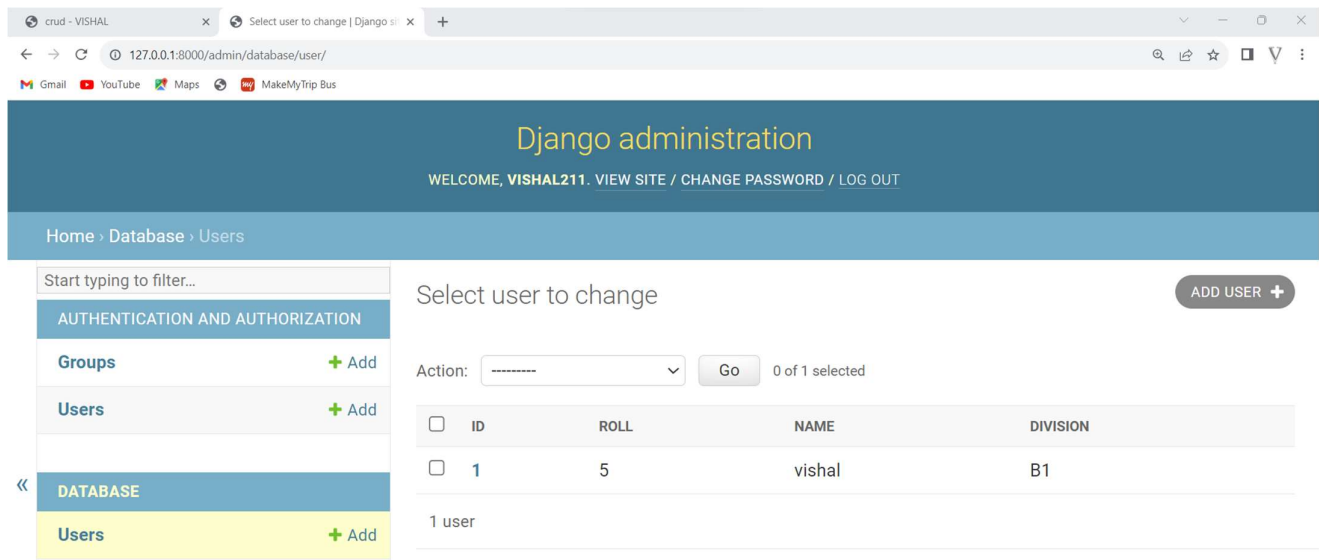

Function based View Model Form Crud Project_VHA

add NEW STUDENT

Roll:

Name:

Division:

Changing adduser.html code for show add list

```

{% extends 'database/base.html' %}
{% block content %}
<div>
<div align="left">
    <h4>add NEW STUDENT</h4>
    <form action="" method="post" >
        {% csrf_token %}

```

```
        {{form.as_p}}
        <input type="submit" value="add">
    </form>
</div>
<div>
    <h4>Show student information</h4>
    {% if stu %}
    <table>
        <tr>
            <th>ID</th>
            <th>Roll</th>
            <th>Name</th>
            <th>Division</th>
        </tr>
        {% for st in stu %}
        <tr>
            <td>{{st.id}}</td>
            <td>{{st.roll}}</td>
            <td>{{st.name}}</td>
            <td>{{st.division}}</td>
        </tr>
        {% endfor %}
    </table>
    {% else %}
    <h4> No Data </h4>
    {% endif %}
</div>
</div>
{% endblock content %}
```

Output:

Site administration | Django site x crud - VISHAL x +

127.0.0.1:8000

Gmail YouTube Maps MakeMyTrip Bus

Function based View Model Form Crud Project_VHA

add NEW STUDENT

Roll:

Name:

Division:

Show student information

ID	Roll	Name	Division
1	5	vishal	B1
2	10	Manish	A
3	1	kavit	C1
4	1	kavit	C1
5	1	kavit	C1
6	1	kavit	C1
7	1	kavit	C1
8	1	kavit	C1
9	1	kavit	C1
10	1	kavit	C1
11	1	kavit	C1
12	1	kavit	C1
13	1	kavit	C1
14	1	kavit	C1
15	4	vishal	B1
16	4	vishal	B1

For add two button edit and delete for each user change in addshow.html(only add one column action)

```
<table>
    <tr>
        <th>ID</th>
        <th>Roll</th>
        <th>Name</th>
        <th>Division</th>
        <th>Action</th>
    </tr>
    {% for st in stu %}
    <tr>
        <td>{{st.id}}</td>
        <td>{{st.roll}}</td>
        <td>{{st.name}}</td>
        <td>{{st.division}}</td>
        <td>
            <a href="#">Edit</a>
            <a href="#">Delete</a>
        </td>
    </tr>
    {% endfor %}
</table>
```

Site administration | Django site x crud - VISHAL x +

127.0.0.1:8000

Gmail YouTube Maps MakeMyTrip Bus

Function based View Model Form Crud Project_VHA

add NEW STUDENT

Roll:

Name:

Division:

Show student information

ID	Roll	Name	Division	Action
1	5	vishal	B1	Edit Delete
2	10	Manish	A	Edit Delete
3	1	kavit	C1	Edit Delete
4	1	kavit	C1	Edit Delete
5	1	kavit	C1	Edit Delete
6	1	kavit	C1	Edit Delete
7	1	kavit	C1	Edit Delete
8	1	kavit	C1	Edit Delete
9	1	kavit	C1	Edit Delete
10	1	kavit	C1	Edit Delete
11	1	kavit	C1	Edit Delete
12	1	kavit	C1	Edit Delete
13	1	kavit	C1	Edit Delete
14	1	kavit	C1	Edit Delete
15	4	vishal	B1	Edit Delete
16	4	vishal	B1	Edit Delete
17	4	vishal	B1	Edit Delete
18	4	vishal	B1	Edit Delete

➤ After that first write delete code

```
# This Function will Delete
def delete_data(request, id):
    if request.method == 'POST':
        pi = User.objects.get(pk=id)
        pi.delete()
        return HttpResponseRedirect('/')

```

➤ Give the url of delete_data function:(make a dynamic url)

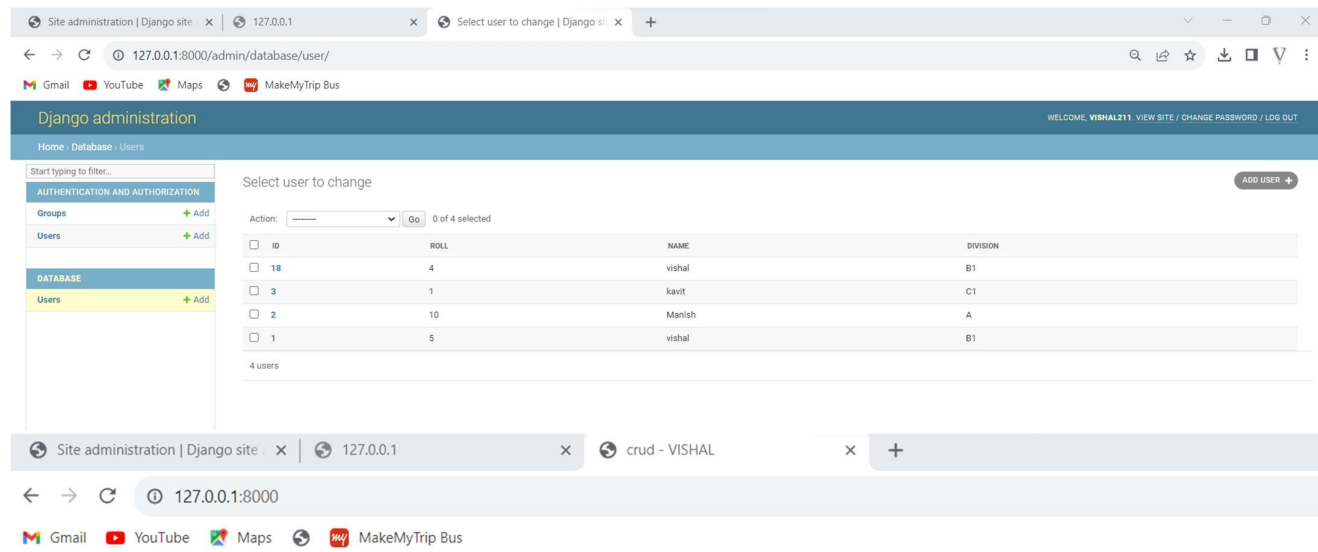

```
from django.contrib import admin
from django.urls import path
from database import views

urlpatterns = [
    path('admin/', admin.site.urls),
    path('', views.add_show, name="addandshow"),
    path('delete/<int:id>/', views.delete_data, name='deletedata')
]

```

➤ How to get the URL using the delete button for that make a form instead of <a> (post method is more secure than get) in addshow.html

```
<form action="{% url 'deletedata' st.id %}" method="post">
    {% csrf_token %}
    <input type="submit" value="Delete">
```

Function based View Model Form Crud Project_VHA

add NEW STUDENT

Roll:

Name:

Division:

Show student information

ID	Roll	Name	Division	Action
1	5	vishal	B1	Edit <input type="button" value="Delete"/>
2	10	Manish	A	Edit <input type="button" value="Delete"/>
3	1	kavir	C1	Edit <input type="button" value="Delete"/>
18	4	vishal	B1	Edit <input type="button" value="Delete"/>

For update make views.py

```
This Function will Update/Edit
def update_data(request, id):
    if request.method == 'POST':
        pi = User.objects.get(pk=id)
        fm = StudentRegistration(request.POST, instance=pi)
        if fm.is_valid():
            fm.save()
        else:
            pi = User.objects.get(pk=id)
```

```
fm = StudentRegistration(instance=pi)
return render(request, 'database/updatestudent.html', {'form':fm})
```

for url

```
urlpatterns = [
    path('admin/', admin.site.urls),
    path('', views.add_show, name="addshow"),
    path('update/<int:id>/', views.update_data, name='updatedata'),
    path('delete/<int:id>/', views.delete_data, name='deletedata')
]
```

For change in htmlfile

```
<form action="{% url 'updatedata' st.id %}" method="post">
    {% csrf_token %}
    <input type="submit" value="update">
```

For updatestudent html file

```
{% extends 'database/base.html' %}
{% block content %}

<div>
    <h4>update STUDENT information</h4>
    <form method="post">
        {% csrf_token %}
        {{form.as_p}}
        <input type="submit" value="update">

    </form>
    <a href="{% url 'addshow' %}"> back to home </a>
</div>
{% endblock content %}
```

Function based View Model Form Crud Project_VHA
